Dear bin chen,

Congratulations once again on the acceptance of your paper to the 2027 International Conference on Multimedia Modeling (MMM 2027).

We are now preparing the proceedings and technical programme. Please carefully note the following instructions regarding the camera-ready submission, registration, and presentation of your paper.

The final camera-ready version of your paper must be uploaded no later than **1 November 2026**. Please note that this is a hard deadline. Accepted submissions missing this deadline may be removed from the proceedings since missing camera-ready papers would delay the entire publication process.

For each accepted paper, the camera-ready submission must include:

- The **final PDF** of the paper (see below for instructions);
- The **complete source files** required to produce the final paper; and
- The completed **Springer Nature rights-release form**. A completed Licence-to-Publish form must be submitted with the camera-ready paper. Please note that the form should be completed and signed by the corresponding author on behalf of all authors of the paper. The paper title and author names on the form must correspond exactly to those in the final camera-ready paper. Please complete all required fields and provide the appropriate signature and date. The form template has been included in this email and it can be downloaded from the MMM 2027 Website.The completed form should be uploaded together with the camera-ready PDF and source files. Only one Licence-to-Publish form per paper is required.

Preparation and Formatting of the Camera-Ready Paper

All camera-ready papers must be prepared using the official Springer Lecture Notes in Computer Science (LNCS) proceedings format. Authors should use the Springer LNCS LaTeX or Word template and should not modify the prescribed margins, fonts, spacing or other layout parameters.

When preparing your final paper, please pay particular attention to the following:

- Author information: The camera-ready version is no longer anonymous. Please include the complete and correct names of all authors, their affiliations, and the appropriate contact information. Please clearly identify the corresponding author. Please also ensure that this author information corresponds

exactly with the License-to-Publish form. Any discrepancies will result in delays to the publication process for your paper.

- Title and author list: Please carefully check the title, author names, ordering and affiliations before submission. These should be considered final at the camera-ready stage.
- Reviewer comments: Authors should take account of the reviewers' comments when preparing the final version and make appropriate corrections and improvements.
- Page limits: The camera-ready paper must comply with the page limit applicable to the paper category. (12 pages + up to 2 pages for references for full and special session papers, and 6 pages + up to 2 pages for references for demo and VBS papers).
- Page numbers and running headers: Please do not add page numbers or running headers. These will be added by Springer LNCS during production.
- Figures: All figures must be clear and legible at their final publication size. Vector graphics should be used for diagrams and schematics wherever possible. Text and labels within figures must remain clearly readable; Springer specifies that lettering in figures should not be smaller than 6 pt.
- Tables and equations: Tables and equations should remain editable and should not be inserted into the paper as images.
- Colour: Authors should ensure that information is not conveyed by colour alone and that figures remain understandable when reproduced or viewed without reliance on colour.
- References: Please carefully check that all references are complete and correctly formatted according to the Springer LNCS style. All cited references should appear in the reference list and all entries in the reference list should be appropriately cited in the paper.
- Acknowledgements and funding information: Please include the final acknowledgements and relevant funding information in the camera-ready version.
- LaTeX source: For LaTeX submissions, please provide the complete source required to compile the paper, including the .tex file, all figures and any other required files. Please also include the final .bbl bibliography file.
- Compilation: Before uploading, please verify that the supplied source compiles successfully and produces the submitted final PDF. Please avoid custom fonts, unnecessary non-standard packages and machine-specific file paths.
- Final PDF: Carefully inspect the final PDF before submission, paying particular attention to equations, figures, tables, special characters, references, author names and affiliations.

Please upload only the final version of the paper, the source files necessary to produce it and the copyright form. The upload option is available to the corresponding/submitting author for each accepted paper in conftool. You should upload three separate files by 1 November 2026:

- **Camera-Ready PDF** - Upload the final Springer LNCS-formatted PDF of your paper.
- **Source Files** - Upload a ZIP archive containing all files required to generate the final paper. For LaTeX submissions, include all .tex, figure, bibliography and .bbl files. For Word submissions, include the final Word source and associated figure files.
- **Licence-to-Publish PDF** - Upload the completed and signed Springer Licence-to-Publish form as a PDF. One form is required per paper.

Authors are strongly encouraged to consult the official Springer instructions and templates for Computer Science proceedings when preparing their camera-ready submission.

Registration Requirement

Every accepted paper must be associated with one full-price registration for inclusion in the MMM 2027 proceedings. One full-price registration is therefore required for each accepted paper. The only exception from this requirement is for VBS papers, which can be registered at the VBS-only rate. The registration system will open on or before Monday 26th October, which is accessible on the conference website. Please ensure to provide your paper IDs when registering. The early-bird registration deadline is the **3rd November**, so please ensure that your registrations are complete by this date.

In-Person and Online Participation

MMM 2027 will support both in-person and online participation. There is no difference in publication status depending on whether an author presents the paper in person or online. In both cases, papers will be included in the proceedings. Therefore papers presented through our online forum will be published in the proceedings in exactly the same manner as papers presented in person.

To assist us in planning the technical programme, particularly the scheduling and organisation of the oral presentation sessions and online forum, we ask that you indicate during registration whether the presenting author for each paper intends to participate:

- In person, or
- Online.

Please provide this information accurately in the registration form, as it will be important when we construct the final presentation schedule.

We look forward to welcoming you to MMM 2027 and to an exciting technical programme.

Best regards,
Your organizers of 33rd International Conference on MultiMedia Modeling.
